

Week-4(a): Implement different layout structures using StackWidget.

```
import 'package:flutter/material.dart';
void main() => runApp(const MyApp());
class MyApp extends StatelessWidget {
  const MyApp({Key?key}):super(key:key);
  @override
  Widget build(BuildContext context){ return MaterialApp(
    home:Scaffold(
      appBar:AppBar( title: const Text(
        'Stack Widget Demo',
      ),
    ),
    body:Center(
      child:Stack(
        children:<Widget>[
          Container( width:300,height: 300, color:Colors.red,)//Container
          Container( width: 250,height:250,color:Colors.black,)//Container
          Container( height: 200,width: 200,color: Colors.purple,)//Container
        ],
      ),
    ),
  );
}
```
